DETAILED ACTION

This office action is a response to the amendment filed on 12/26/2006.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The prior art of record fails to disclose the claimed invention such as before dipping the dielectric material in the solution of catalytic metal particles, plasma etching the surface of the dielectric material to roughen its surface and to create peaks and valleys in the surface of that material exhibiting van der Waal forces capable of attracting catalytic particles having a slight electrostatic dipole. The closest reference of Portner, modified by Woo et al., teaches an electroless plating process for EMI shielding for electronic components including a process of dipping a surface of a dielectric material of plastic in a solution containing catalytic metal particles such as noble metals having a slight electrostatic dipole moment when in solution to help the particles attach to the surface of the dielectric material and immersing the catalyzed surface of the dielectric material in a metal solution so as to cause a layer containing metal to be plated upon the surface of the dielectric material containing the catalytic metal particles by a process of electroless plating. However, Portner, modified by Woo et al., fails to teach a process of plasma etching the surface of the dielectric material to roughen its surface and to create peaks and valleys in the surface of that material exhibiting van der Waal forces prior to the process of dipping the dielectric material in the solution of catalytic metal particles. It is

not obvious taken alone or in combination of other references fairly to suggest the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Claims 1 and 3-16 are allowed.
